PROFESSIONAL SUMMARY

Software developer with hands-on experience in building modern web applications, data-driven dashboards, real-time systems, and IoT-based solutions. Strong foundation in frontend development with working knowledge of backend systems. Proven ability to deliver scalable, high-performance applications from concept to deployment using clean and maintainable architecture.

CORE SKILLS

- Programming Languages: JavaScript, Python
- Web Development: HTML, CSS, React
- Tools & Platforms: Git, Firebase, Vercel, Google Studio
- UI/UX Design: Figma, Canva
- IoT Development: NodeMCU, Sensor Integration
- Concepts: Responsive Design, State Management, API Integration, Real-time Data Handling

EXPERIENCE

ARTIFICIAL INTELLIGENCE INTERN

March 2026 – June 2026

Nyeras Edu-Tech and Innovations Private Limited

Project: Customer Behaviour Analysis & Predictive Analytics

- *Tech Stack: Python, Pandas, Matplotlib, Seaborn, Scikit-learn*
- Performed exploratory data analysis (EDA) on customer datasets to identify behavioural patterns
- Cleaned and pre-processed data by handling missing values and inconsistencies
- Visualized trends using Matplotlib and Seaborn for data-driven insights
- Applied K-Means clustering for customer segmentation
- Generated insights on customer behaviour and high-value segments

PROJECTS

FinDash — Finance Dashboard

- *Tech Stack: React, JavaScript, Vite, Recharts, CSS*
- Developed a finance dashboard using React and Vite to manage and visualize financial data
- Implemented interactive charts for income, expenses, and trends using data-driven approaches
- Built role-based UI with Admin and Viewer access using conditional rendering
- Added advanced features like filtering, sorting, pagination, and CSV export for better usability
- Managed global state efficiently using Context API and useReducer
- Designed a fully responsive user interface with dark/light mode support for improved user experience

Hostel Expense Manager (Mess Bill Generator)

- *Tech Stack: React, TypeScript, Firebase, Vite*
- Built a web application to manage and generate hostel mess bills efficiently
- Integrated Firebase for real-time database operations and data synchronization
- Implemented automatic monthly expense calculation for accurate billing
- Developed the application using React and TypeScript for better scalability and maintainability
- Designed a clean, responsive user interface to enhance usability across devices

Smart Tank Monitor — IoT Water Level System

- Tech Stack: Next.js, TypeScript, Socket.IO, SQLite, NodeMCU
- Developed a real-time water level monitoring system using IoT technologies
- Integrated NodeMCU sensors for continuous live data collection and transmission
- Built an interactive dashboard using Next.js and WebSockets for real-time visualization
- Implemented simulation mode to test system behaviour without physical hardware
- Designed a scalable architecture with database integration for reliable data storage

Superbike Showcase — Static Web Project

- Tech Stack: HTML, CSS, JavaScript
- Developed a responsive website to showcase superbike details and specifications
- - Designed visually appealing layouts with structured sections for multiple bikes
- - Implemented interactive UI elements using JavaScript for improved user engagement
- - Organized content with clean navigation and user-friendly design
- Ensured responsive design for seamless experience across devices

EDUCATION

Master of Computer Application (MCA)	December 2024 - Present
M S Ramaiah Institute of Technology, Bangalore	CGPA: 8.46/10
Bachelor of Computer Applications (BCA)	October 2021 - June 2024
Reva University, Bangalore	CGPA: 7.73/10

CERTIFICATIONS

Machine Learning with Python	IBM (Cognitive Class)
Introduction to Generative AI	Google Cloud (Coursera)
Introduction to IoT	Simplilearn
SQL (Basic)	HackerRank

HOBBIES & INTERESTS

Building personal projects and exploring new technologies
UI/UX design using Figma and Canva
Bike riding and outdoor exploration
